

GREEN LIGHT NEW ORLEANS

lowering New Orleans' energy usage
one light bulb at a time

Mission:

Green Light New Orleans is a New Orleans environmental organization. We provide families and individuals with free compact fluorescent light bulbs and free installation service for the bulbs.

Goal:

The city of New Orleans faces the serious consequences of global warming through the possibility of stronger and more frequent hurricanes as well as the daily challenges of increased energy costs. Our goal is to switch the entire city from incandescent light bulbs to energy-saving compact fluorescent light bulbs (CFLs), one house at a time.

Green Light New Orleans helps people lower their energy bills AND provides the opportunity to actively fight global warming on an individual level.

What you need to know before you apply:

Compact fluorescent light bulbs may generally be used in enclosed fixtures as long as the enclosed fixture is not recessed. Totally recessed fixtures (for example a can light with a cover over the bulb and recessed into the ceiling) create temperatures that are too high to allow the use of a compact fluorescent bulb.

To use a compact fluorescent bulb on a dimmer switch, you must use a bulb that's specifically made to work with dimmers. 3-way lights need special light bulbs as well.

yes, I would like apply for a free CFL light bulb installation

Name: _____

Address: _____

City, State, Zip: _____

phone: _____
